

COVID-19 has disrupted the mobility of health care workers, a feature of Health Systems that is fundamental to efficient, equitable and optimal health care delivery

But Now...

Announcements from Qantas and the WHO about exploring verifying customer health/immunization status before entry signals an accelerating trend towards proof-for-access. For health care, this is a chance to boost patient safety and worker mobility.

IS YOUR HEALTH FACILITY READY?

Trybe.ID's HealthPass is a solution that enables one's health status to be securely presented and verified, ie. COVID-19 negative, vaccinated, or similar thereby permitting safe entry to a facility. Trybe.ID is a Digital Credentials platform that facilitates the **creation, issuance and presentation of verifiable credentials, ensuring data integrity and privacy are at its core.**

How it Works:

1. Health care workers (HCWs) receive COVID19 vaccinations / tests from health care providers. They are then issued a Digital Credential to their Digital Wallet as proof of this.
2. Facilities requiring COVID-19 status assurance request presentation of a Digital Credential, proving vaccination or a negative COVID19 test within the past 24 hours that can easily be presented and verified as authentic in real time.
3. Where assurance is required, like in long-term care homes or when moving between clinics, all HCWs must present a valid Digital Credential to check-in and be admitted into the facility.

resources.trybe.id/health/demo

Audit HCWs and verifiably prove compliance with health, risk and related governance frameworks or protocols

Create secure and safe entry requirements which enable staff & patient confidence and peace of mind

Enforce strict entry requirements ensuring the safety of the facility

Trybe.ID is actively being utilized by over 30 issuing institutions globally, spanning 10 countries
