

Mass leisure and business travel has come to a grinding halt as COVID-19 has disrupted a key element of our social fabric and economy

But now...

Recent announcements from [Qantas](#) and the [WHO](#) that they are exploring verifying customer COVID-19 test/vaccination status before entry signals an accelerating trend towards proof-for-access. There is an urgent and growing need by all industries to adopt verifiable credentialing technology as a pathway to normalizing business.

IS YOUR BUSINESS READY?

Trybe.ID's **TravelPass** provides a solution that enables one's health status to be securely presented and verified, ie. COVID-19 negative, vaccinated, or similar thereby permitting safe entry to a airport/airplane. Trybe.ID TravelPass is a Digital Credentials platform that facilitates the **creation, issuance and presentation of verifiable credentials, ensuring data integrity and privacy are at its core.**

How it Works:

1. Passengers and staff receive COVID19 vaccinations / tests from health care providers. They are immediately issued a Digital Credential to their Digital Wallet, likely on their phone, as proof of this.
2. Airlines request presentation of a Digital Credential proving vaccination or a negative COVID19 test within the past 24 hours to fly.
3. All Passengers must present a valid Digital Credential to be admitted onto the flight.

Air Travel may now resume Operations while:

Auditing passengers and verifiably prove compliance with health, risk and related governance frameworks or protocols

Creating secure and safe entry requirements which allow passengers and staff confidence and peace of mind

Enforcing strict entry requirements ensuring the safety of passengers and staff

Trybe.ID is actively being utilized by over 30 issuing institutions globally, spanning 10 countries
